INDEX.

A.

Acid, antimonic, and Acid, arsenic, action of hydrochloric acid upon sulphide of mercury, in presence of, 159.
—— bibromacetic, 1.
—— boracic, its action upon alkaline carbonates, 177, 180, 182.
———— its action upon the carbonates of baryta and strontia, 188, 189, 190.
———— its action upon carbonate of lithia, 181, 187.
———— its action upon carbonate of potassa, 178, 184.
———— its action upon carbonate of soda, 179, 181, 186.
———— its action upon the chlorides, 164.
———— its action upon iodides and bromides, 165.
———— its action upon nitrates and carbonates, 165.
———— its action upon sulphates, 161.
———— on the action of, upon the carbonates of the alkalies and alkaline earths, by C. L. Bloxam, 177.
———— on the action of, upon the salts of the more volatile acids at high temperatures, by Norman Tate, 160.
—— bromacetic, on the action of bromine on, by W. H. Perkin and B. F. Duppa, 1.
—— graphic, 266.
—— hydrochloric, action of, on some native combinations of oxide of mercury with oxide of antimony, 29.
———— and ammonia, on the absorption of, in water, by H. E. Roscoe and W. Dittmar, 128.
———— on the action of, upon sulphide of mercury, in the presence of certain other substances, by F. Field, 158.
—— lactic, on the constitution of, by H. Kolbe, 15.
———— conversion of, into propionic acid, by C. Ulrich, 23.
—— lizaric, 208.
—— nitric, on a new method for the quantitative estimation of, by E. Pugh, 35.
—— oxylizaric, 208.
Acid, parasorbic, 46.
—— propionic, conversion of lactic acid into, by C. Ulrich, 23.
—— ruberythric, 216.
—— rubiacic, 204.
—— rubianic, 216.
—— rubichloric, 205.
—— sorbic, 46.
—— titanic, by E. Riley, 13.
Acids, diamidic, 105.
—— diamine-amidic, 104.
—— monamidic tertiary, 100.
—— monamidic quartary, 103.
—— new volatile organic, of the mountain ash berry, by A. W. Hofmann, 43.
Alizarine and purpurine, optical characters of, 219.
Alcohols, diatomic, 222.
—— polyatomic, by H. Debus, 222.
—— triatomic, 242.
Alkalies and alkaline earths, on the action of boracic acid upon their carbonates, by C. L. Bloxam, 177.
Alkaline carbonates, action of boracic acid upon the, at 212° F., 177.
———— action of boracic acid upon, at a bright red heat, 182.
———— action of boracic acid upon, at a dull red heat, 180.
Amides, 62.
Ammonia and its derivatives, by A. W. Hofmann, 62.
—— action of, upon bisulphochloride of amylene, 119.
—— and hydrochloric acid, on the absorption of, in water, by H. E. Roscoe and W. Dittmar, 128.
—— relation between the amount of, absorbed in water, at 0°C, and the pressure under which the absorption occurs, 147.
—— relation between the amount of, absorbed in water under the ordinary atmospheric pressure, and the temperature at which the absorption occurs, 150.
—— acid derivatives of, constructed upon the water-type, 94.
Ammonium, bibromacetate of, 4.
Amylene, action of ammonia upon bisulphochloride of, 119.

Amylene, action of chloride of sulphur upon, 114.
—— action of the chlorides of sulphur upon ethylene and, 112.
—— bichlorosulphide of, 115.
Antimony, on the separation of mercury from, 32.
—— oxide of, on some native combinations of oxide of mercury with, by F. Field, 27.
Arsenic and copper, sulphide of, 9.
—— and sulphur, on some minerals containing, by F. Field, 8.
Arsides, metal, 92.

B.

Balance sheet of the Chemical Society, 176.
Barium, sorbate of, 47.
Barrat, James, analysis of the water of Holywell, North Wales, 52.
Baryta and strontia, action of boracic acid upon the carbonates of, 188.
Bibromacetate of ammonium, 4.
—— of ethyl, 6.
—— of lead, 4.
—— of mercury, 4.
—— of potassium, 4.
—— of silver, 4.
Bisulphamylene, oxide of, 122.
—— hydrated oxide of, 121.
Bloxam, Charles L., on the action of boracic acid upon the carbonates of the alkalies and alkaline earths, 177.
Brodie, B. C., on the combination of carbonic oxide with potassium, 269.
———— researches on the atomic weight of graphite, 261.
Bromides and iodides, action of boracic acid upon, 165.
Bromine, on the action of, on bromacetic acid, by W. H. Perkin and B. F. Duppa, 1.

C.

Calcium, sorbate of, 48.
Carbonates of the alkalies and alkaline earths, on the action of boracic acid upon the, by C. L. Bloxam, 177.
—— and nitrates, action of boracic acid upon, 165.
Carbonic oxide, on the combination of, with potassium, by B. C. Brodie, 269.
Chemical Society, anniversary meeting of the, 166.
———— balance sheet, 176.
———— proceedings at the meetings of, 290.
Chloride of sorbyl, 52.
Chlorides, action of boracic acid upon the, 164.
Chlorine, action of bisulphide of, on ethylene, 113.
Chlorogenine, 205.
Chlororubian and chlororubiadine, 215.
Copper and arsenic, sulphide of, 9.
—— protochloride of, action of hydrochloric acid upon sulphide of mercury in presence of, 159.

D.

Debus, H., on the polyatomic alcohols, 222.
Diamides, organo-metallic, 91.
—— primary, 78.
—— secondary, 80.
—— tertiary, 83.
Diglycerides, 243.
Dittmar, W., and H. E. Roscoe, on the absorption of hydrochloric acid and ammonia in water, 128.
Duppa and Perkin on the action of bromine on bromacetic acid, 1.

E.

Electrical incandescences, on the decomposition of gaseous compounds by, by A. W. Hofmann, 273.
Erythrozym, 212.
Ethylene, action of metals upon iodide of, by Carl Von Thann and J. A. Wanklyn, 258.
—— action of bisulphide of chlorine, on 113.
—— action of chloride of sulphur upon, 116.
—— and amylene, action of the chlorides of sulphur upon, 112.
Ethylidine, 236.

F.

Field, F., on the action of hydrochloric acid upon sulphide of mercury, in the presence of certain other substances, 158.
———— on some minerals containing arsenic and sulphur, from Chili, 8.
———— on some native combinations of oxide of mercury with oxide of antimony, 27.
Food, discourse on the composition of the animal portion of our, and on its relations to bread, by J. H. Gilbert, 54.

G.

Garanceux, 207.
Garancine, 200, 207.
Gas, hydrochloric acid, relation between the amount of, absorbed in water at 0°C, and the pressure under which the absorption occurs, 129.
—— hydrochloric acid, relation between the amount of, absorbed in water under the ordinary atmospheric pressure, and the temperature at which the absorption occurs, 136.
Gaseous compounds, decomposition of, by electrical incandescences, by A. W. Hofmann, 273.
Gilbert, J. H., discourses on the composition of the animal portion of our food, and on its relations to bread, 54.
Glycols, chemical properties of, 224.
Graphite, researches on the atomic weight of, by B. C. Brodie, 261.
Graphon, 268.
Gregory, Professor (of Edinburgh), obituary notice of, 172.
Guayacanite, 10.
Guthrie, F., on some deviatives from the olefines, 109.

H.

Herapath, Thornton John, obituary notice of, 171.
Hofmann, A. W., new volatile organic acids of the mountain ash berry, 43.
———— on ammonia and its derivatives, 62.
———— on the decomposition of gaseous compounds by electrical incandescences, 273.
Hydrochlorate of ninaphtylamine, 154.

I.

Iodides and bromides, action of boracic acid upon, 165.
Iron, sesquichloloride of, action of hydrochloric acid upon sulphide of mercury, in presence of, 159.

K.

Kolbe, on the constitution of lactic acid, 15.
Kynaston, J. W., analysis of the water of a spring at Billingborough, Lincolnshire, 57.

L.

Lead, bibromacetate of, 4.
Lithia, action of boracic acid upon carbonate of, 181, 187.

M.

Madder, on the colouring matters of, by E. Schunk, 198.
Madder-red, madder-purple, and madder-orange, 201,
Manganese, peroxide of, action of hydrochloric acid upon sulphide of mercury in presence of, 160.
Mercury, bibromacetate of, 4.
—— on the separation of, from antimony, 32.
—— oxide of, on some native combinations of, with oxide of antimony, by F. Field, 27.
—— sulphide of, on the action of hydrochloric acid upon, in the presence of certain other substances, by F. Field, 158.
Metalamides-organo, 89.
———— secondary, 90.
———— tertiary, 90.
—— primary, 88.
—— tertiary, 89.
Metal-phosphides, metal-arsides, and metal-stibides, 92.
Metals, action of, upon iodide of ethylene, by Carl von Than and J. A. Wanklyn, 258.
Monamides, primary, 63.
—— secondary, 66.
—— tertiary, 71.
Monoglycerides, 243.
Mountain ash berry, new volatile organic acids of, by A. W. Hofmann, 43.

N.

Ninaphtylamine, 153.
—— hydrochlorate of, 154.
—— platinum-salt of, 155.
—— sulphate of, 154.
Nitrates and carbonates, action of boracic acid upon, 165.
Nitrous substitution, on bases produced by, by C. S. Wood, 152.

O.

Obituary notice of Professor Gregory, 172.
—— Thornton J. Herapath, 171.

Obituary notice of Hugh Lee Pattinson, 169.
Olefines, on some derivatives from the, by F. Guthrie, 109.
Organo-metalamides, 90.

P.

Pattinson, Hugh Lee, obituary notice of, 169.
Paviin, note on, by G. G. Stokes, 126.
Perchlororubian, 215.
Perkin and Duppa, on the action of bromine on bromacetic acid, 1.
Phenyl-sorbamide (sorbanilide), 51.
Phosphides, 87.
—— metal, 92.
Potassa, action of boracic acid upon carbonate of, at a bright red heat, 184.
Potassium, bibromacetate of, 4.
—— on the combination of carbonic oxide with, by B. C. Brodie, 269.
Pugh, E., on a new method for the quantitative estimation of nitric acid, 35.
Purpurine, 200.
—— and alizarine, optical characters of, 219.

R.

Riley, E., on titanic acid, 13.
Roscoe, H. E., and W. Dittmar, on the absorption of hydrochloric acid and ammonia in water, 128.
Rubiacine, 203.
Rubiadine, rubiafine, and rubiagine, 213.
Rubian, 210.
Rubianine, 213.
Rubiretine, 213.

S.

Schunk, E., on the colouring matters of madder, 198.
Silver, bibromacetate of, 4.
—— tartrate of, 47.
Soda, carbonate of, action of boracic acid on, at 212°, 179.
—— action of boracic acid upon the carbonate of, at a bright red heat, 186.
—— carbonate of, action of boracic acid upon, at a dull red heat, 181.
Sorbamide, 50.
Sorbate of barium, 47.
—— of calcium, 48.
—— of silver, 47.
Sorbic ether, 50.
Sorbyl, chloride of, 50.
Stibides, metal- 92.
Stokes, G. G., note on paviin, 126.
—— on the optical characters of purpurine and alizarine, 219.
Strontia and baryta, action of boracic acid upon the carbonates of, 188, 190.
Sulphate of ninaphtylamine, 154.
Sulphates, action of boracic acid upon, 161.
Sulphide of copper and arsenic, 9.
Sulphur, action of chloride of, upon amylene, 114.
—— action of chloride of, upon ethylene, 116.
—— action of the chlorides of, upon ethylene and amylene, 112.
—— and arsenic, on some minerals containing, by F. Field, 8.

T.

Tate, Norman, on the action of boracic acid upon the salts of the more volatile acids at high temperatures, 160.
Triamides, 86.
—— organo-metal, 91.
Triglycerides, 244.
Trimetalarsides, 93.
Trimetalphosphides, 92.
Trimetalstibides, 93.

U.

Ulrich, conversion of lactic acid into propionic acid, 23.

V.

Verantine, 213.
Von Than, Carl, and J. A. Wanklyn, action of metals upon iodide of ethylene, 258.

W.

Wanklyn, J. A., and Carl Von Than, action of metals upon iodide of ethylene, 258.
Water, on the absorption of hydrochloric acid and ammonia in, by H. E. Roscoe and W. Dittmar, 128.
—— analysis of the, of a spring at Billingborough, Lincolnshire, by J. W. Kynaston, 57.
—— of Holywell, North Wales, analysed by James Barratt, 52.
Water-type, acid derivatives of ammonia constructed upon the, 94.
Wood, C. S., on bases produced by nitrous substitution, 152.

X.

Xanthine, 201.
